

# PULSE CONNEX<sup>®</sup>

Connecting you to Energy Information...  
because Knowledge is Power

Real-Time monitoring & analysis tool that includes a dashboard, real-time graphing, historical load profile graphing, alarms and reporting.

*The "little white box" that will revolutionize how you interpret energy use information*

## What will you be able to do with a little Knowledge about your energy use?

Increase Efficiency

SAVE Money!

Set Limits

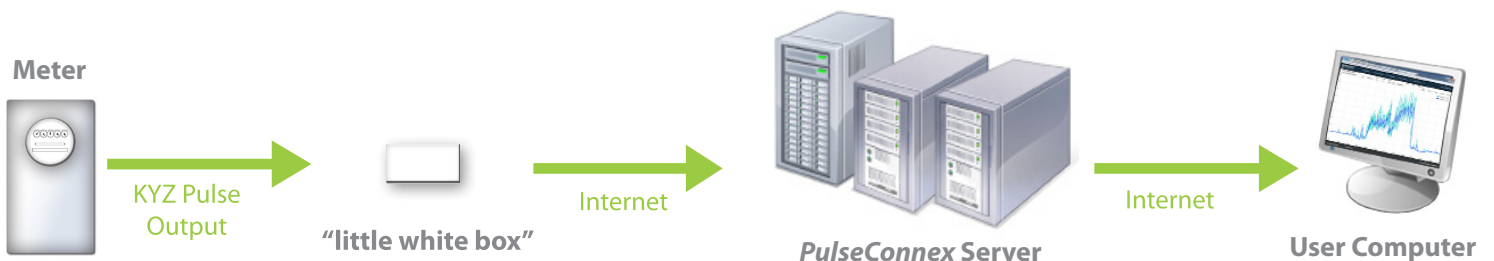

Gain CONTROL of your Electric Use!

Pinpoint Triggers

Improve Budget Forecast

Quickly Verify Bills

## How does it work?

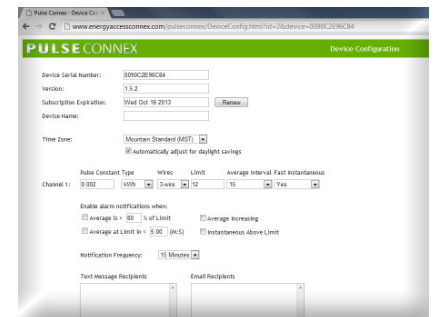

## Easy to Use

- Installation is as easy as connecting one end of the “little white box” to the meter and the other end to an Ethernet jack and the PulseConnex Box automatically “phones home.”
- No need for the IT department, expensive infrastructure, software or operating systems... PulseConnex is truly Plug & Play requiring only our “little white box.”
- To access Real-Time pulse information, go to [www.pulseconnex.com](http://www.pulseconnex.com) and create an account with a username and password. Once the year subscription has been paid through Pay Pal, the account will be activated and ready for immediate use.
- Setting up a PulseConnex is quick and easy with the Configuration Window. Just enter Pulse Parameters and begin viewing Real-Time energy use. If a change in the parameters is needed, it's as simple as returning to the configuration window for alterations.
- PulseConnex data is displayed graphically allowing for visual interpretation, making it easier to comprehend power information and removes the tedious process of sifting through interval data. By actually seeing your electric use in action, identifying areas of inefficiency is straightforward and simple.

## Flexible

- Connect and view up to 2 sources of incoming pulses at once, providing the capability to quickly compare meters.
- Use PulseConnex for anything that a pulse can count such as: kWh, kvarh, kvah, gallons, ccf, etc.
- “Cloud Based”- Access PulseConnex information anywhere there's an internet connection by logging onto [www.pulseconnex.com](http://www.pulseconnex.com).
- Receive Automated Load Profile reporting emailed to you daily and export historical data to a CSV file.
- Receive text message and email alerts (if enabled) when approaching a predefined peak limit, informing you of high energy use wherever you are.

## Instant

- Immediately view Real-Time pulse information –Anytime, Anywhere – by logging onto [www.pulseconnex.com](http://www.pulseconnex.com).
- Pulse information is recorded and streamed almost instantaneously to the online PulseConnex account.

## Reliable

- All load profile information is stored on the PulseConnex database located on a major data center server for dependable access of historical data upto a year.
- If internet connection is lost or interrupted, the “little white box” will store data packages for up to 24 hours to ensure no pulse information is lost. Once internet connectivity is established, the data packages are immediately transferred to the PulseConnex database.

*Providing you with superior products and creative solutions for all your demand control and pulse metering needs.*
